HITARTH PATHAK

OBJECTIVE – I am a Software Developer (Web) with a strong foundation in HTML, CSS, JavaScript and modern front-end frameworks & libraries like Bootstrap, Tailwind CSS and React JS. Passionate about building responsive, user-friendly web applications, I have created multiple projects showcasing my skills. Eager to contribute to a dynamic team environment and continuously expand my expertise in the field.

SKILLS –
Programming Languages – HTML, CSS, JavaScript
Frameworks / Libraries – Bootstrap, Tailwind CSS, React JS
Operating Systems – Windows, Linux (Ubuntu)
Deployment – GitHub Pages, Vercel
Tools – Git, GitHub, Visual Studio Code, Canva
Interpersonal – Leadership, Creativity, Professionalism, Attention To Detail, Clean Code

EXPERIENCE –
Software Developer (Front-End) (Intern - Paid) – *Auriga IT, Jaipur (May, 2025 – Present)*
- learned typescript, tailwind css & redux.
- vibe coded an e-mail summarization feature using agentic ai (windsurf, agents, large language models, etc.).
- contribute to building auriga sales copilot in office hackathon using agentic ai (next js, typescript, python, etc.).
- developed a full stack chat app with socket io using agentic ai (react js, tailwind css, node js + express js).

Software Developer (Web) – *Freelancing, Jaipur (January, 2025 – Present)*
- built a relationship expert business website.
- built a coaching institute website.

PROJECTS –
Brogrammerz
an online retro social directory for computer programmers.
- web brutalism (intentional minimalistic design to create nostalgic feel).
- registration and login (form validation through regex).
- data management (structured in objects and arrays, stored in local storage).
- search and filter users (array methods, loops, conditions, etc.).
- mini blogging (allows users to post mini blogs / articles on their profile).
- user interactions (follow, comment, etc.).
- ranking (based on number of followers).
- managed media files (converted profile photo and resume to base64 and blob).
- application invoke (invoke dialer and mail when clicked on number and e-mail).
- custom animations (pop-up animations on connections box and post details).

Projectopedia
a project management system for managing a complete project lifecycle.
- built using react (vite) + tailwind css in atomic structure.
- navigation through react-router-dom using link & usenavigate (+ error pages).
- context api for global state management.
- hooks (usestate, useeffect, usenavigate, useparams, usecontext) + custom hook (useticket).
- lazy loading + conditional rendering + memoization (react.memo).
- portals (project portal + ticket portal).
- custom drag and drop tickets between multiple columns (planning, started, ongoing, testing & completed).
- search projects and tickets through event handlers like onclick (global) & onchange (within project).

Shopper
an e-commerce website for clothing.
- built using react (vite) + tailwind css in atomic structure.
- navigation through react-router-dom using link, navlink & usenavigate (+ error pages).
- context api for global state management.
- hooks (usestate, useeffect, usenavigate, useparams, usecontext, useform).
- managed forms (login & registration) through react-hook-form (+ error handling).
- handled api (self created – public json api) through axios.
- lazy loading & conditional rendering for multiple components.
